Section 3: Automated Exception & Anomaly Analysis

- **Exception Diagnostic:** `The policy number on the claim form differed from the policy number on the synthetic insurance certificate.`
- **Defect Classification:** `policy_number_mismatch`
- **Automated Decision Logic:** Suffix mismatch detected. Suffix `-01` designates the primary subscriber (employee), whereas the patient is the enrolled spouse, registered as dependent suffix `-02` on the synthetic insurance certificate. Confidence score 0.96.
- **Non-Destructive Guardrail:** Field correction cannot be applied without human verification of the active dependent certificate.

Section 4: Resolution & Reviewer Audit Record

- **Approved Resolution:** Propose a field correction to align the policy number with the authoritative insurance certificate.
- **Supporting Evidence Rationale:**

> *"Synthetic claim form and certificate contain different policy identifiers; a reviewer verified the authoritative value before correction."*

- **Remediation Trigger:** Claims Specialist verified member enrollment roster. Correction approved: Update Box 1a from `POL-982341-01` to `POL-982341-02` and release claim to adjudication engine.\n
